

## **GTS Flexible Materials - RoHS / RoHS2 Compliance**

GTS Flexible Materials Ltd (GTS) manufactures coatings and laminated composites for many industries worldwide and will comply with national and international legislation together with customer requests that might restrict the use of selected chemicals.

Specifically, GTS complies with the European Restriction of Hazardous Substances Directives (RoHS) (\*) which restricts the use of certain metals and chemicals as published.

This statement is based on supplier raw material information, and on a test program which confirms raw materials and our production process for continuing compliance to RoHS directives, through periodic checks of the completed production materials.

The test program is part of the company Quality Management System, which meets the requirements of IATF 16949:2016 and ISO 9001:2015 and independently audited by NQA annually.

The most recent review of final products in April 2019, has shown continuing RoHS compliance in each production area. Details are available on request.

A handwritten signature in black ink that reads 'Graham Farmer'.

Graham Farmer  
Group Executive Chairman  
April 2019

(\*)

The original RoHS directive, adopted in 2003, has been subsequently updated and is now known as RoHS 3 (EU Directive 2015/863)
